

112 Suomi - Instructions

1. Find the application at your application store. It goes by the name "112 Suomi".
2. Download the application from the application store as instructed.
3. After installing the application, place its icon at a visible location on your phone screen.
4. Familiarize yourself with the application immediately while installing it and also instruct children and seniors in its use.
5. You need to enter your telephone number the first time you open the application, so enter the number as soon as you install it. This means the application will also be ready for use in possible emergency situations.
6. You may change the telephone number or, for instance, the application's language of use from the application's settings.

7. Next time you open the application, you will enter directly to the view that allows you to make an emergency call with the Call112 button. Note that when using an iPhone, the call is started immediately. When using Windows and Android phones, you have to start the call from the phone's call view.
8. Other contact information tab allows you to find contact information for other emergency numbers. The call starts immediately when you tap the name. In iPhone, the call is started immediately. In Windows ja Android phones, you have to start up the call from the phone's call view.
9. If you get into an emergency and cannot make a connection, you may call the Emergency Response Centre normally and list your coordinates on your phone screen. List the numbers one screen at a time, from left to right.
